I am a Professional truck driver. I travel and train other drivers in 48 states and Canada. Weather and traffic reports in major cities are a major consideration for me. I utilize traffic and weather information that I receive from XM to plan my travel routing hours in advance of arriving in these areas. My interpretation of what I hear allows me to make a ADVANCED AND EDUCATED decision about safety concerns of a student traveling in congested areas. Local traffic and weather stations available on AM and FM radio are not accessible in advance enough to make these decisions. I pay for XM and should be entitled to the services I want when I want them without restrictions. There is an amendment to afford free speech. I need no government oversight to afford financial stability of privately owned radio group who fails to provide me with what I need on demand.
